STATEWIDE CURRENT SITUATION: Tropical Storm Harvey continues to weaken as it drifts slowly over Southeastern Texas. Harvey currently has sustained winds of 45 mph with higher gusts. The center of the storm is located about 40 miles east-southeast of San Antonio and is slowly moving south-southwest. Additional weakening is expected and Harvey is likely to become a tropical depression with sustained wind speeds less than 40 mph by this evening.

The slow movement of the storm will result in continuing the devastating, life threatening flooding that has already occurred in parts of the middle and upper Texas coast overnight. Additional rainfall accumulations of 15-25 inches are expected and some locations will receive a total of around 40 inches throughout the duration of the storm. At other Texas locations during the same time period, Harvey is expected to produce total rain accumulations of 5 to 15 inches farther south toward the lower Texas coast, farther west toward the Texas Hill Country, and farther east through southwest and central Louisiana. Numerous river locations in an area between Corpus Christi, San Antonio, and Houston are forecast to reach major to record flood levels.

Tornadoes are likely within the storm's rain bands over the next couple days near the middle and upper Texas coast into far southwest Louisiana.

Governor Abbott has issued an additional disaster declaration adding; Atascosa, Bexar, Brazos, Caldwell, Cameron, Comal, Grimes, Guadalupe, Hardin, Jasper, Kerr, Lee, Leon, Madison, Montgomery, Newton, Tyler, Walker, Washington and Willacy Counties on August 26, 2017.
